

Grade 4

Chapter 7

Logo Calculations

1.Name the mathematical operations which can be performed using Logo commands.

Ans: The mathematical operations can be performed using Logo commands are addition ,subtraction, multiplication and division.

2.Name the two commands which are used to perform mathematical operations.

Ans: The two commands which are used to perform mathematical operations are

1) PRINT command

2)Label command

3.Define.

Ans: Print command:

Print command is used to display the result in the recall list box. It can also be used for mathematical calculations.

Label command:

Label command is used to display the result in the drawing area. It can also be used for mathematical calculations.

4.How to add numbers using sum functions?

Ans: Sum function is used to add numbers .If we want to add more than two numbers then put all the numbers inside the brackets.eg. PR (SUM 5 6 7).

5. Define the following with examples.

Ans: **a) Difference function:**

Difference function is used to subtract numbers .eg. PR DIFFERENCE 8 2.

b) Product function:

Product function is used to multiply numbers. If we want to multiply more than two numbers put it in brackets.eg. PR (PRODUCT 3 4 3).

c) Quotient function:

Quotient function is used to divide two numbers .eg. PR QUOTIENT 50 5.
