Autodesk bought the company. Subsequent to the 2005 acquisition, Autodesk discontinued RADICS. However, Autodesk did maintain RADICS under its subsidiary 3DCC. The success of the purchase motivated Autodesk to take a lead in the construction industry, with Autodesk Revit. The company brought Revit, a BIM application, to market in 2008 and released it in 2010. It was originally intended to be an architectural only product but has since been extended to other industries. Autodesk Revit Architecture is the only product in Autodesk's Architecture portfolio. The Revit platform also has a large plugin community to expand the functionality to other industry sectors. Autodesk also began to branch into other industries, acquiring industry-specific products such as Autodesk Civil for civil engineering. In October 2008 Autodesk acquired 3D printing company 3D Systems. Autodesk's efforts were put into accelerating the adoption of Autodesk Design Review and Revit, as well as supporting the creation of digital prototypes of completed products.
